

# MAKE A CLOWNFISH HANDPRINT

You'll need: Paper, Poster paint, Palette, Markers, Glue and Googly eyes

Step 1

Squeeze the poster paint on your palette.

Step 2

Stripe your palm in orange and white paint. Get creative!

Step 3

Make a firm handprint on the paper, then wash your hands.

Step 4

Paint just your fingers black and make two prints at the bottom of the paper. Wait for black paint to dry.

Step 5

Wash your hands, paint just your fingers green, and make prints on top of the black prints.

Step 6

Now you have seaweed!

Step 7

Wash your hands and put white paint on your index finger.

Step 8

Dot the paper with white paint - these are your bubbles!

Step 9

Use glue to stick a googly eye onto your fish.

Complete

And that's it! You've made your very own clownfish handprint!

# You could make a CLOWNFISH out of your handprint!

Here's some interesting facts about clownfish:

- Clownfish can be recognised by their orange body and white stripes.
- Clownfish live among sea anemones. Although sea anemones can sting, clownfish have a special layer of mucus that protects them. Living in harmony, sea anemones protect clownfish from predators, while clownfish help to remove debris and parasites from sea anemones.
- Clownfish are all born male, but the largest among them will change into a female and become the dominant one in the group.
