1. Corals are not plants! They are ____.
2. Corals have ____ around their mouth which they use to catch food!
3. Corals have algae living inside them. Algae are like plants and require ____ to make food.
4. When the water becomes too warm, corals lose their colours, and this is known as coral ____.
5. Coral reefs are like neighbourhoods, home to animals who find food, seek ____ and reproduce!
6. Reef fish are brightly coloured, because it helps them ____ among the similarly-coloured corals!
7. Hard corals produce skeletons made up of ____.
8. Corals catch tiny ____ that they eat!

Did you have fun learning about corals? There are hard and soft corals, and even those that can grow. Come see them for yourself at S.E.A. Aquarium!

Visit rwsentosa.com/seaa-academy for more fun-filled activities you can do at home!
